

SEMI AUTOMATIC CROWN CAPPING MACHINE

Next Packaging's semi-automated crown capping machines is suitable for crown corking glass bottles like Beer Bottles, soda bottles, Milk Bottles, Juice and Soft drink Bottles etc.

With speed up to 10-30 bottles per minute, the machine's heavy duty pneumatic piston (Heavy Duty) completely eliminates the need of manual sealing pressure in order to give standardized results each time.

Its capping quality is unmatched thanks to its ergonomically designed structure which makes it suitable for medium and small scale units having limited production capacity.

Working:

The bottles are placed by the operator under the capping head of the machine. Being semi-automated model, the crown cap is fed directly to magnetic plunger of the capping head.

On pressing the foot switch, the pneumatically operated piston gets actuated and caps the bottle.

Salient Features:

- Compact table top design
- Adjustable Sealing Pressure
- Low maintenance cost

- No need of manual sealing pressure
- Better Durability
- Sturdy Design

Technical Specifications:

Speed: 10-30 strokes/minute

Pneumatics components : all components Janatic make

Make : Full Stainless steel covering

Timer : select make

Container Size Diameter: 50-85 mm

Container Size Height: 100-300 mm

Weight : 25 kg
