LOAD CELLS – KELI / ZEMIC:

Load structure is equipped with heavy-duty strain gauge type load cells with a unique mounting assembly to ensure accurate performance. The assembly is designed to compensate for expansion and contraction between the Weighbridge and the foundation caused by temperature variation, allowing the load cells to align freely. The applied load is converted directly to an electrical signal by these precision hermetically sealed load cells having ample load capability (150% functional and 300% structural) to withstand accidental overloading.

LOAD STRUCTURE :

Load structure is comprising of wide flanged steel beams of adequate heavy section high grade tested steel and is designed to take heavy loads. Accurately fabricated, the side flanges and other structural members are built to high quality engineering standards for durable and accurate performance and being installed in a Pitless / Pit type thereby reducing the cost of construction of foundation. The platform load structure is provided with thick M.S. Plates duly ribbed to avoid slipping. Restrainers are provided with the platform to regulate the oscillations of the platform.
